

# community gis

## Getting Started

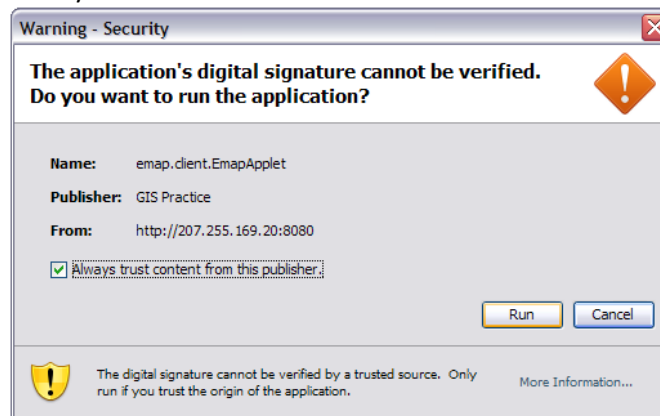

To open the Community GIS Viewer, click the “VIEWER” button above. You then have to click the “I Agree, Proceed to Viewer” Button located after the Disclaimer.

If the red X  appears in the viewer, then you do not have Java installed.

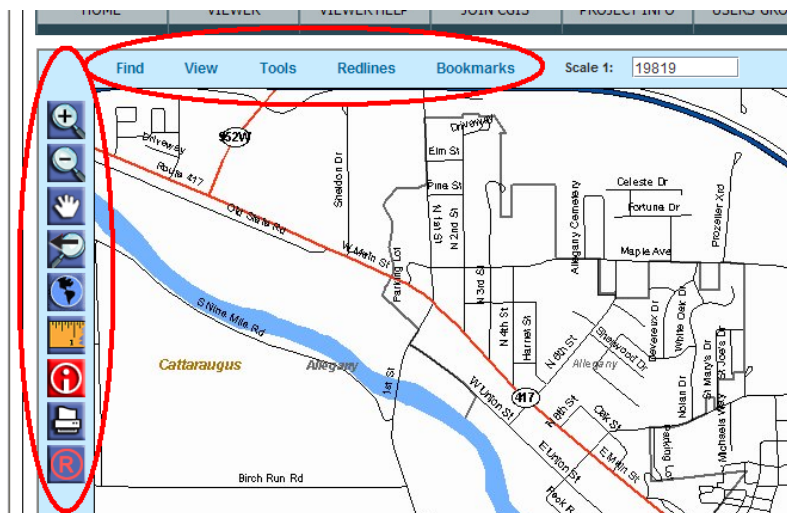

The new Community GIS Viewer requires users to download and install Java. Click here for the free download before proceeding.

<http://java.com/en/download/index.jsp>

If you have Java installed, and are trying to access the viewer for the first time, you will encounter the following Java Pop-Up for which you should check the box for “Always trust content from this Publisher” and then click “Run”. As long as you have that box checked, you will not encounter the Java Pop-Up during future viewer visits on your machine.

The Community GIS Viewer Interface features Dropdown Menus across the top and Buttons along the left-hand side. Descriptions of the functions of the Buttons will display if you hover over the Button with your mouse.

To zoom to a specific Community GIS Member, select “Community GIS Members” under the “Bookmarks” menu at the top of the viewer. Then simply select the particular member you wish to view.

To turn on and off GIS Data Layers, select “Table of Contents” under the “View” menu at the top of the viewer. This opens a list of all possible GIS layers that can be turned on and off by checking and unchecking and then hitting “Apply”.
